

PRIVATE EVENTS – APRIL 2026

Our team has prepared the highest standard of customized programs for you to have a unique experience of the heavens. Great hospitality and specialized scientists are willing to spacewalk with you and your friends and family this summer.

Our observatory will travel you to the Universe with our large, professional telescopes.

Jupiter – The King of Planets		Venus – Cypriot	
Proposed Program			
Time	Description		
19:30	Cyprus formation and evolution. Geological open-air exhibition.		
19:35	Telescope observations of Venus. Have the experience of conducting observations from the island where the goddess was born.		
19:50	Cyprus Geology, Fossils and World Dinosaur Exhibition.		
20:15	Planetarium program of YOUR CHOICE “Jupiter – The King of Planets” or “Venus – Cypriot”.		
20:50	Break. Answering your questions, and a short visit to the Space and Space Coins exhibition. Visit our gift shop, to shop unique memorabilia.		
21:00	Night sky tour with a laser pointer (Bonus).		
21:10	Observations (weather permitting) of the Moon (1-2 and 20-30 April), Venus, Jupiter and Deep Sky Objects.		
<p>“Jupiter – the King of planets”</p> <p>Since ancient times people have identified one very bright luminary, which gradually moves across the sky. This planet was named after the supreme god, in Roman mythology, Jupiter. It turned out that the ancients prophetically assigned the name of the most important deity to the largest, most influential planet. Book this family program to travel to Jupiter and its amazing world.</p>		<p>“Venus – Cypriot”</p> <p>Goddess Venus is blood related to our beautiful Island of Love, Cyprus. According to the ancient Greek mythology, the goddess Aphrodite (in Latin Venus) was born in Cyprus at Petra Tou Romiou. This planetarium program reveals the unusual connection between Venus-Cypriot, the planet Venus and other realms on the sky.</p>	

April 2026 gives you a unique opportunity to observe bright planets in the Western part of the sky: beige Jupiter and snow-white Venus on background of bright stars of Winter Circle, in the Southern part Leo and in Eastern an amazing semicircle of North Crown as well as other marvels of Cyprus’s clear sky from our observatory.
